

SAUDI FELLOWSHIP TRAINING PROGRAM

CARDIAC ANESTHESIA

Final Written Examination

Examination Format:

The Saudi subspecialty fellowship and diplomas final written examination shall consist of one paper with 80-120 Single Best Answer MCQs. Up to 10% unscored items can be added for pretesting purposes.

Passing Score:

The passing score is 70%. However, if the percentage of candidates passing the examination before final approval is less than 70%, the passing score must be lowered by one mark at a time aiming at achieving 70% passing rate or 65% passing score whichever comes first. Under no circumstances can the passing score be reduced below 65%.

Blueprint Outlines:

No.	Sections	Percentage
1	Cardiac Anesthesia Pharmacology	5%
2	Cardiac Anesthesia Physiology	5%
3	Pediatric Cardiac Anesthesia	17%
4	Adult Cardiac Anesthesia ¹	25%
5	Interventional Cardiology	10%
6	Monitoring and TEE	15%
7	Cardiac ICU	9%
8	Hemostasis for Cardiac Anesthesia	5%
9	Anesthesia Management for Cardiac Patients for non-Cardiac surgery	9%
Total		100%

¹Adult Cardiac include: IHD- Valvis- majvos- transplant – Adult congenital

Note:

- Blueprint distributions of the examination may differ up to +/-5% in each category
- Research, Ethics, Professionalism, and Patient Safety are incorporated within various domains
- Percentages and content are subject to change at any time. See the SCFHS website for the most up-to-date information

Example Questions

EXAMPLE OF K2 QUESTIONS

Question 1

A patient with previously normal left ventricular function is undergoing elective coronary artery bypass grafting. Immediately after separation from cardiopulmonary bypass, some measurements are noted.

Blood pressure via radial intra-arterial catheter	78/52 mmHg
Heart rate	94 bpm
Pulmonary artery pressure	28/18 mm Hg
Cardiac index	2.7

Which of the following is the most prudent initial intervention?

- A. Direct measurement of intra-aortic pressures to verify radial artery correlation
- B. Addition of a phenylephrine infusion to provide α -receptor-mediated vasoconstriction
- C. Addition of an epinephrine infusion to provide both inotropic support and α -receptor-mediated vasoconstriction
- D. An intra-aortic volume infusion using pulmonary capillary wedge pressures as a guide to the adequacy of left ventricular filling
